

Maintenance Plan (WINTER Sept-Apr)

Our Valued Client's Maintenance Plan:

Follow these steps for the best results:

- From installation water is required 15 minutes per day for the first 8 days (please note that this is an estimate depending on the weather).
- Do not give water on day 9
- Cut the grass on day 10 (please note that lawn mower blade must be on the highest setting).
- Start the water process again on day 10 after cutting, 15 minutes per day for the next 6 days (up to and including day 15).
- Do not give water on day 16
- Cut the grass on day 17 and give water afterwards
- From here on:
 - Water must be given so that the soil is constantly damp
 - Grass must be cut at least 1x per week, but ideally 2x per week

For even better results:

- Purchase our Compost Special Mix every 3 months and spread evenly over the lawn
- This compost special mix consist of the following:
 - Topsoil
 - Compost
 - Super phosphate

Note: Grass is living thing and without proper care it will die or be overrun by weeds. Constant water application and cutting of the grass is a necessity. Please do not apply lawn dressing/compost/topsoil over the grass for the first 2 months.

Our various services:

- Kikuyu, LM and Compost Special Mix collection sales
- Kikuyu and LM Deliveries
- Kikuyu and LM Installations
- Manual and Automatic irrigation system installations
- Compost Special Mix Deliveries (min of 3m 2 / cube)
- Maintenance programme
- Plant Hire
